

Drainage System Maintenance:

The Borough of Lewisburg has an extensive storm drainage system to carry stormwater away from roadways and properties and conveys it to Buffalo Creek, Miller Run, Bull Run and West Branch Susquehanna River. The Borough continues to expand this system during street improvement projects to increase capacity and minimize poor drainage areas. The Borough is committed to maintaining this drainage system. Debris can obstruct the flow of water which can cause overflow onto roadways and private properties. The Borough performs maintenance on an annual basis to keep the drainage system functioning properly. If you notice the drainage system not functioning correctly please contact the Borough office at (570) 523-3614.
